ABSTRACT

There was an error in the published version of Equation (6); the equation should read as

$$X_R \equiv \frac{R_p(\text{true})}{R_p(\text{observed})} = \left(\frac{R_{t*}}{R_{l*}} \right) \sqrt{\frac{F_{\text{total}}}{F_t}}. \quad (6)$$

The calculations and results presented in the paper utilized the correct form of the equation and are unaffected by the error in the equation. The authors sincerely regret the error.
